FOR PLAYERS

Understanding your stats

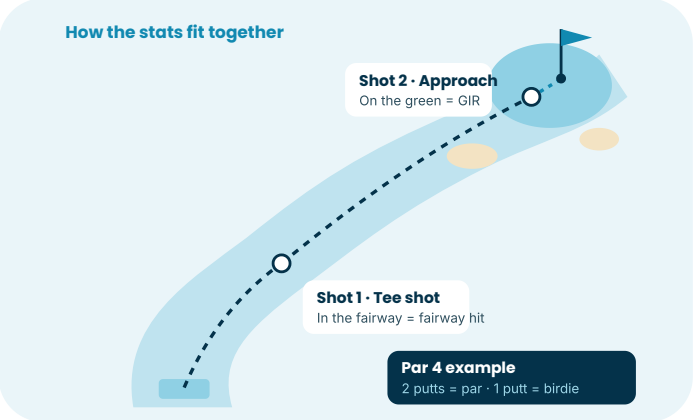
A plain-English guide to every number on your PPT dashboard — what it means, how it's worked out and what it tells you about your game.

START HERE

Every stat tells part of the story

Your score shows the result. Your stats show **how** you got there: off the tee, into the green, around the green and on it. Read them together and you'll see which part of your game is costing the most shots.

- Compare averages over 5–10 rounds, not one round
- Look for trends more than single numbers



STAT BY STAT

STAT	WHAT IT MEANS & HOW IT'S WORKED OUT	WHAT IT TELLS YOU
Fairways hit	Tee shot finishes in the fairway on par 4s and 5s. Fairways hit ÷ fairways available × 100 (par 3s don't count).	Driving accuracy. Missing a lot? Check where — left, right or both.
Greens in regulation	On the green in par minus two (1 shot on a par 3, 2 on a par 4, 3 on a par 5). Greens hit ÷ holes played × 100.	Ball-striking — one of the strongest links to lower scores.
Putts & 3-putts	Total strokes taken on the green, plus how many holes needed three putts or more.	Putting and distance control. Read with GIR — missing greens often means fewer putts.
Up & downs	After missing a green, you still make par or better. Saves ÷ greens missed × 100.	Short game — chipping, pitching, bunkers and the putt after.
Penalty shots	Strokes added for water, out of bounds, lost balls or unplayables. Counted per round.	Course management — often the quickest shots to save.

ROUGH GUIDE · WHAT DIFFERENT LEVELS AVERAGE

Stat	20 hcp	10 hcp	Scratch	Tour
Fairways	~40%	~48%	~55%	~60%
GIR	~20%	~35%	~55%	~65%
Putts	~34	~32	~30	~29
Up & downs	~15%	~30%	~45%	~60%

Approximate, commonly quoted figures. They vary by course, conditions and age — use them as a guide, not a target.

Reading your stats together

Low GIR, good up & downs → approach shots.
Good GIR, lots of 3-putts → lag putting.
Low fairways + penalties → tee-shot strategy.
